1965 Cumulative Index

All major feature articles appearing in Woodworking Digest in 1965 are listed in this index according to function and then in order of publication date. A minimum number of tear sheets or reprints of some of the articles are available and may be obtained by writing: Editor, Woodworking Digest, Hitchcock Building, Wheaton, Illinois 60188. Specify article by title, issue, and page.

DIV I—MATERIALS

Lumber

Gamma Rays Open New Industry, (Part I) ..... **Jan., p. 31**
An explanation of Wood-Plastics Combination material.

Newcomer's Notebook—What Is Plywood ..... **Feb., p. 27**
Definition of materials and classification of types.

How Albuquerque Mill Competes in East ..... **Feb., p. 33**
Materials, selection, control, sales education are success ingredients.

Gamma Rays Open New Industry, (Part II) ..... **Feb., p. 42**
Explanation of monomer impregnation, polymerization by irradiation.

AWMA Reviews Progress of 50th Year ..... **Feb., p. 49**
Walnut Manufacturers Association oriented to consumer-industry benefit.

Polaris Unfair to American Press ..... **Feb., p. 50**
Industry needs to know research on new applications for wood.

Double Mill Output Scratches Surface of SPA Future **Mar., p. 33**
Pine's versatility produces resurgence of Southern species.

Southern Pine Nail-Holding Capacity ..... **Mar., p. 34**
Fastening research shows favorable figures for construction.

Southern Pine Plywood Comes of Age ..... **Mar., p. 35**
Expanding markets produce increased plant construction.

Laminating Beams of Southern Pine ..... **Mar., p. 36**
Improved equipment-adhesives permit engineering specific complicated design.

Miller Operation Proves Southern Pine's Versatility **Mar., p. 37**
Efficient mill operation, treatment, testing give competitive edge.

Perpetuating the Species ..... **Mar., p. 38**
Good forestry practices boost Southern Pine growth beyond harvest rate.

Kirby Builds a Lumber Empire ..... **Mar., p 39**
Coordinating supply, planned growth and efficient equipment gets results.

Marketing Means and Architectural Trends ..... **Mar., p. 42**
Enlarged architectural usage is a result of efficient marketing.

No Hand-Outs for War on Poverty ..... **Mar., p. 48**
Incentive, reinvestment keynotes community mill project, not "free" aid.

Gamma Rays Open New Industry, (Part III) ..... **Apr., p. 32**
Explanation of impregnation as key step in WPC materials.

Qualities of Irradiated Wood ..... **Apr., p. 33**
Scientists research the mechanical properties of irradiated wood.

Red Alder is a Preferred Species ..... **Apr., p. 34**
Machining, finishing, handling qualities affect choice.

The Universal Particleboard ..... **May, p. 31**
Characteristics of Aspen permit broad range of engineered board.

Motivating the Architect ..... **May, p. 35**
Service, product knowledge are "musts" for Plywood sales representatives.

Irradiated Wood Treatment, (Part IV) ..... **May, p. 47**
Examination of monomer reaction and species suitability to irradiation.

New Particleboard Standards ..... **May, p. 48**
Comprehensive standards to help users determine product requirements.

Fastening Research Solves Hickory Problems ..... **June, p. 31**
Improved nail design holding capacity and penetration effects.

A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find use for plentiful "scrub" timber.

Free Access Floors for Computers ..... **June, p. 40**
Engineering special purpose products with Plywood.

Why Gamma Rays Are Best, (Part V) ..... **July, p. 35**
Effects of different irradiation on woods and monomers.

No Cure for Compression Wood ..... **Aug., p. 28**
Its origin and problems identified with it.

Newcomer's Notebook—Softwood Plywood ..... **Aug., p. 33**
Explanation of requirements and applications by woodworkers.

Wood Is First Choice for Polaris Nose Cones ..... **Oct., p. 19**
Wood combines with adhesive and technology to find new uses in space program.

Newcomer's Notebook—Marine Grade Plywood ..... **Oct., p. 45**
Explanation of origin of use and present day industry requirements.

First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Exploration of a job that requires top skills and coordination.

Modernization Money Brings 10% ..... **Dec., p. 30**
Equipment and materials handling investments reduce production costs.

Veneers

Newcomer's Notebook—What is Veneer ..... **Jan., p. 25**
Simplified explanation of material and how to cut it.

Will Walnut Have a Future ..... **Apr., p. 25**
Heavy export of fine hardwoods depletes U. S. supply.

Walnut Controversy or Extinction ..... **Apr., p. 27**
Industry faces moving with thin veneers or costly importing.

DIV II—WOOD TREATMENT & CONVERSION

Equipment

Select the Right Kiln ..... **July, p. 25**
What to look for to determine your specific drying needs.

Good Kiln Maintenance Pays Off ..... **Oct., p 30**
Trouble areas that can cost your operation money if not caught.

Wood Conversion

Laminating Beams of Southern Pine ..... **Mar., p. 36**
Improved equipment-adhesives permit engineering specific complicated design.

The Universal Particleboard ..... **May, p. 31**
Characteristics of Aspen permit broad range of engineered board.

A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find use for plentiful "scrub" timber.

First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.

Wood Treatment

Gamma Rays Open New Industry, (Part I) ..... **Jan., p. 31**
An explanation of Wood-Plastics Combination materials.

Gamma Rays Open New Industry, (Part II) ..... **Feb., p. 42**
Explanation of monomer impregnation, polymerization by irradiation.

Miller Operation Proves Southern Pine's Versatility **Mar., p. 37**
Efficient sawmill operation, treatment, testing give competitive edge.

Gamma Rays Open New Industry, (Part III) ..... **Apr., p. 32**
Explanation of impregnation of wood as key step in WPC materials.

Irradiated Wood Treatment, (Part IV) ..... **May, p. 47**
Examination of monomer reaction and species suitability to irradiation.

Why Gamma Rays Are Best, (Part V) ..... **July, p. 35**
Effects of different irradiation on woods and monomers.

Inside an Irradiator, (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 treating plant.

No Cure for Compression Wood ..... **Aug., p. 28**
Its origin and problems identified with it.

Is WPC Production Practical ..... **Sept., p. 24**
Industry, government examine production aspects and plant locations.

Put WPC Magic Into Commercial Use ..... **Oct., p. 33**
New York industry and government agencies study state potential for plants.

Blue Stain is Not Necessary ..... **Nov., p 32**
Origin and methods of prevention in materials.

Make Wood 100% Dimensionally Stable by WPC ..... **Nov., p. 34**
Specifics of properties of WPC material that affect future product development.

1965 Cumulative Index

All major feature articles appearing in Woodworking Digest in 1965 are listed in this index according to function and then in order of publication date. A minimum number of tear sheets or reprints of some of the articles are available and may be obtained by writing: Editor, Woodworking Digest, Hitchcock Building, Wheaton, Illinois 60188. Specify article by title, issue, and page.

DIV I—MATERIALS

Lumber

Gamma Rays Open New Industry, (Part I) ..... **Jan., p. 31**
An explanation of Wood-Plastics Combination material.

Newcomer's Notebook—What Is Plywood ..... **Feb., p. 27**
Definition of materials and classification of types.

How Albuquerque Mill Competes in East ..... **Feb., p. 33**
Materials, selection, control, sales education are success ingredients.

Gamma Rays Open New Industry, (Part II) ..... **Feb., p. 42**
Explanation of monomer impregnation, polymerization by irradiation.

AWMA Reviews Progress of 50th Year ..... **Feb., p. 49**
Walnut Manufacturers Association oriented to consumer-industry benefit.

Polaris Unfair to American Press ..... **Feb., p. 50**
Industry needs to know research on new applications for wood.

Double Mill Output Scratches Surface of SPA Future **Mar., p. 33**
Pine's versatility produces resurgence of Southern species.

Southern Pine Nail-Holding Capacity ..... **Mar., p. 34**
Fastening research shows favorable figures for construction.

Southern Pine Plywood Comes of Age ..... **Mar., p. 35**
Expanding markets produce increased plant construction.

Laminating Beams of Southern Pine ..... **Mar., p. 36**
Improved equipment-adhesives permit engineering specific complicated design.

Miller Operation Proves Southern Pine's Versatility **Mar., p. 37**
Efficient mill operation, treatment, testing give competitive edge.

Perpetuating the Species ..... **Mar., p. 38**
Good forestry practices boost Southern Pine growth beyond harvest rate.

Kirby Builds a Lumber Empire ..... **Mar., p 39**
Coordinating supply, planned growth and efficient equipment gets results.

Marketing Means and Architectural Trends ..... **Mar., p. 42**
Enlarged architectural usage is a result of efficient marketing.

No Hand-Outs for War on Poverty ..... **Mar., p. 48**
Incentive, reinvestment keynotes community mill project, not "free" aid.

Gamma Rays Open New Industry, (Part III) ..... **Apr., p. 32**
Explanation of impregnation as key step in WPC materials.

Qualities of Irradiated Wood ..... **Apr., p. 33**
Scientists research the mechanical properties of irradiated wood.

Red Alder is a Preferred Species ..... **Apr., p. 34**
Machining, finishing, handling qualities affect choice.

The Universal Particleboard ..... **May, p. 31**
Characteristics of Aspen permit broad range of engineered board.

Motivating the Architect ..... **May, p. 35**
Service, product knowledge are "musts" for Plywood sales representatives.

Irradiated Wood Treatment, (Part IV) ..... **May, p. 47**
Examination of monomer reaction and species suitability to irradiation.

New Particleboard Standards ..... **May, p. 48**
Comprehensive standards to help users determine product requirements.

Fastening Research Solves Hickory Problems ..... **June, p. 31**
Improved nail design holding capacity and penetration effects.

A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find use for plentiful "scrub" timber.

Free Access Floors for Computers ..... **June, p. 40**
Engineering special purpose products with Plywood.

Why Gamma Rays Are Best, (Part V) ..... **July, p. 35**
Effects of different irradiation on woods and monomers.

No Cure for Compression Wood ..... **Aug., p. 28**
Its origin and problems identified with it.

Newcomer's Notebook—Softwood Plywood ..... **Aug., p. 33**
Explanation of requirements and applications by woodworkers.

Wood Is First Choice for Polaris Nose Cones ..... **Oct., p. 19**
Wood combines with adhesive and technology to find new uses in space program.

Newcomer's Notebook—Marine Grade Plywood ..... **Oct., p. 45**
Explanation of origin of use and present day industry requirements.

First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Exploration of a job that requires top skills and coordination.

Modernization Money Brings 10% ..... **Dec., p. 30**
Equipment and materials handling investments reduce production costs.

Veneers

Newcomer's Notebook—What is Veneer ..... **Jan., p. 25**
Simplified explanation of material and how to cut it.

Will Walnut Have a Future ..... **Apr., p. 25**
Heavy export of fine hardwoods depletes U. S. supply.

Walnut Controversy or Extinction ..... **Apr., p. 27**
Industry faces moving with thin veneers or costly importing.

DIV II—WOOD TREATMENT & CONVERSION

Equipment

Select the Right Kiln ..... **July, p. 25**
What to look for to determine your specific drying needs.

Good Kiln Maintenance Pays Off ..... **Oct., p 30**
Trouble areas that can cost your operation money if not caught.

Wood Conversion

Laminating Beams of Southern Pine ..... **Mar., p. 36**
Improved equipment-adhesives permit engineering specific complicated design.

The Universal Particleboard ..... **May, p. 31**
Characteristics of Aspen permit broad range of engineered board.

A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find use for plentiful "scrub" timber.

First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.

Wood Treatment

Gamma Rays Open New Industry, (Part I) ..... **Jan., p. 31**
An explanation of Wood-Plastics Combination materials.

Gamma Rays Open New Industry, (Part II) ..... **Feb., p. 42**
Explanation of monomer impregnation, polymerization by irradiation.

Miller Operation Proves Southern Pine's Versatility **Mar., p. 37**
Efficient sawmill operation, treatment, testing give competitive edge.

Gamma Rays Open New Industry, (Part III) ..... **Apr., p. 32**
Explanation of impregnation of wood as key step in WPC materials.

Irradiated Wood Treatment, (Part IV) ..... **May, p. 47**
Examination of monomer reaction and species suitability to irradiation.

Why Gamma Rays Are Best, (Part V) ..... **July, p. 35**
Effects of different irradiation on woods and monomers.

Inside an Irradiator, (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 treating plant.

No Cure for Compression Wood ..... **Aug., p. 28**
Its origin and problems identified with it.

Is WPC Production Practical ..... **Sept., p. 24**
Industry, government examine production aspects and plant locations.

Put WPC Magic Into Commercial Use ..... **Oct., p. 33**
New York industry and government agencies study state potential for plants.

Blue Stain is Not Necessary ..... **Nov., p 32**
Origin and methods of prevention in materials.

Make Wood 100% Dimensionally Stable by WPC ..... **Nov., p. 34**
Specifics of properties of WPC material that affect future product development.

Wood Drying

Good Kiln Loading Practices Yield Profits ..... **Nov., p. 28**
Adherence to certain rules saves degrade losses.

Modernization Money Brings 10% ..... **Dec., p. 30**
Materials handling and equipment designs boost output and reduce costs.

DIV III—MACHINERY & EQUIPMENT

Imaginative Sawmilling is a Profitable Art ..... **Jan., p. 42**
Equipment location, techniques, handling combined for profitable operation.

How Albuquerque Mill Competes in East ..... **Feb., p. 33**
Materials, selection, control, sales education are success ingredients.

European Machinery Preview Tour ..... **Feb., p. 46**
Woodwork equipment manufacturer educates industry on foreign equipment.

Double Mill Output Scratches Surface of SPA Future **Mar., p. 33**
Pine's versatility produces resurgence of Southern species.

Miller Operation Proves Southern Pine's Versatility **Mar., p. 37**
Efficient mill operation, treatment, testing give competitive edge.

Kirby Builds a Lumber Empire ..... **Mar., p. 39**
Coordinating supply, planned growth and efficient equipment gets results.

SPA's 50th Annual Convention ..... **Mar., p. 43**
Machinery Manufacturers show latest logging and mill equipment.

No Hand-Outs for War on Poverty ..... **Mar., p. 48**
Incentive, reinvestment keynotes community mill project, not "free" aid.

Walnut Controversy or Extinction ..... **Apr., p. 27**
Industry faces moving with thin veneers or costly importings.

What Shape Are You In for Sanding ..... **Apr., p. 41**
Equipment developments promise improved product quality.

Routing Without Costly Patterns or Labor ..... **May, p. 44**
Automated developments speed production, simplify labor.

A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find use for plentiful "scrub" timber.

Product Research Increases Millwork Profits ..... **June, p. 43**
A farm building manufacturer tackles new markets before losing old ones.

Turn Disaster Into Advantage ..... **July, p. 30**
Information to help keep an operation going despite floods or fire.

Inside an Irradiator, (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 treating plant.

Tricky Techniques on Your Tenoner ..... **Aug., p. 24**
Knowledge of equipment capacity gives production versatility.

Make Materials Flow Pay ..... **Sept., p. 17**
Improved plant layout, location, equipment break deadlock on company growth.

Is WPC Production Practical ..... **Sept., p. 24**
Industry, government examine production aspects and plant location.

High Speed Lumber Laminating ..... **Sept., p. 35**
New equipment and adhesives developments automate and speed operations.

First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.

Make Use of Tenoner Versatility ..... **Nov., p. 33**
Competent operators can reduce production costs by fewer operations.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

Why Pay for Clean Air ..... **Dec., p. 23**
Explanation of compressed air equipment and its specific uses.

Modernization Money Brings 10% ..... **Dec., p. 30**
Materials handling and equipment designs boost output and reduce costs.

DIV IV—MATERIALS HANDLING

What Makes Roller Coating Pay, (Part II) ..... **Jan., p. 36**
Panel finishing information on thinners, roll coverings and machines.

Imaginative Sawmilling is a Profitable Art ..... **Jan., p. 42**
Equipment location, production techniques, materials handling are teamed to plant needs.

Honeycomb Liner Saves $14,000/Year ..... **Jan., p. 49**
Unique application of materials improves operations, reduces maintenance.

What Makes Roller Coating Pay, (Part III) ..... **Feb., p. 38**
Answers to specific problems and charts for roll covering guides.

Evans New Prefinish Line ..... **May, p. 39**
Ingredients are simplicity, speed, furniture finish and product variety.

Add Glamour and Cut Packaging Costs ..... **May, p. 50**
Protective packaging promotes product, cuts handling and waste.

Inside an Irradiator (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 plant.

Make Materials Flow Pay ..... **Sept., p. 17**
Improved plant layout, location, equipment break deadlock on company growth.

Electric Trucks Save $1000 Each ..... **Sept., p. 22**
Plywood mill combines reduced maintenance with unique leasing plan.

Light Loads Mean Lost Profits ..... **Oct., p. 23**
Special trailers are required to haul dry lumber to fullest weight limits.

Good Kiln Loading Practices Yield Profits ..... **Nov., p. 28**
Adherence to certain rules saves degrade losses.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

Modernization Money Brings 10% ..... **Dec., p. 30**
Materials handling and equipment designs boost output and reduce costs.

DIV V—SMALL TOOLS

RAD Drills Shave Production Costs ..... **Nov., p. 24**
Air drills give lower maintenance, easy operation, short set-up time.

DIV VI—SANDING

Red Alder is a Preferred Species ..... **Apr., p. 34**
Machining, finishing, handling qualities affect manufacturer's choice.

What Shape Are You in for Sanding ..... **Apr., p. 41**
Equipment developments promise improved product quality.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV VII—ADHESIVES

Laminating Beams of Southern Pine ..... **Mar., p. 36**
Improved equipment-adhesives permit engineering specific complicated design.

Red Alder is a Preferred Species ..... **Apr., p. 34**
Machining, finishing, handling qualities affect choice.

Animal Glues vs. Vinyl Copolymers (Part I) ..... **June, p. 34**
A comparison of preparation, application and adhesive capabilities.

Free Access Floors for Computers ..... **June, p. 40**
Special purpose products combine Plywood, metal and proper adhesives.

Animal Glues vs. Vinyl Copolymers, (Part II) ..... **July, p. 29**
Production hints that can affect your selection of adhesives.

High Speed Lumber Laminating ..... **Sept., p. 35**
New equipment and adhesives developments automate and speed operations.

Wood is First Choice for Polaris Nose Cones ..... **Oct., p. 19**
Wood combines with adhesive and technology to find new uses in space program.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV VIII—FASTENING AND ASSEMBLY

Southern Pine Nail-Holding Capacity ..... **Mar., p. 34**
Fastening research shows favorable figures for construction, furniture.

Nylon-Coated Staples Increase Production 466% ..... **Mar., p. 53**
Fastener developments and equipment adaptations increase output.

Fastening Research Solves Hickory Problems ..... **June, p. 31**
Improved nail design holding capacity and penetration effects.

Square Nails Hold Better ..... **July, p. 33**
More research on nail designs that benefit woodworkers.

Make 1500 Skids per Man/Day ..... **Sept., p. 27**
Railroad rulings allow simplified shipping skid production.

Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV IX—FINISHING

What Makes Roller Coating Pay (Part II) ..... **Jan., p. 36**
Panel finishing information on thinners, roll coverings and machines.

Honeycomb Liner Saves $14,000/Yr. ..... **Jan., p. 49**
Unique application of materials improves operations, reduces maintenance.

What Makes Roller Coating Pay (Part III) ..... **Feb., p. 38**
Answers to specific problems and guide charts for roll covering.
Red Alder is a Preferred Species ..... **Apr., p. 34**
Machining, finishing, handling qualities affect choice.
Evans New Prefinish Line ..... **May, p. 39**
Ingredients are simplicity, speed, furniture finish and product variety.
Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV X—PACKAGING-SHIPPING

Add Glamour and Cut Packaging Costs ..... **May, p. 50**
Protective packaging promotes product, cuts handling and waste.
Make 1500 Skids per Man/Day ..... **Sept., p. 27**
Railroad rulings allow simplified shipping skid production.
Light Loads Mean Lost Profits ..... **Oct., p. 23**
Special trailers are required to haul dry lumber to fullest weight limits.
Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV XI—SAFETY EQUIPMENT SUPPLIES

Turn Disaster Into Advantage ..... **July, p. 30**
Information to help keep an operation going despite floods or fire.
Inside An Irradiator, (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 treating plant.
Good Kiln Loading Practices Yield Profits ..... **Nov., p. 28**
Adherence to certain rules saves degrade losses.
Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.

DIV XII—SERVICES

Behind the Hardwood Curtain ..... **Jan., p. 39**
N. Nash registers a complaint on NHLA's Rules Committee procedure.
American Style Know-How in Turin ..... **Jan., p. 40**
Equipment manufacturer's aid program benefits under-developed countries.
How Albuquerque Mill Competes in East ..... **Feb., p. 33**
Materials, selection, control, sales education are success ingredients.
Woodworking Industry's Future ..... **Feb., p 41**
Expanding markets call for improved equipment and sales programs.
European Machinery Preview Tour ..... **Feb., p. 46**
Woodwork equipment manufacturer educates industry on foreign equipment.
AWMA Reviews Progress of 50th Year ..... **Feb., p. 49**
Walnut Manufacturers Association oriented to consumer-industry benefit.
Polaris Unfair to American Press ..... **Feb., p. 50**
Industry needs to know research on new applications for wood.
Double Mill Output Scratches Surface of SPA Future **Mar., p. 33**
Pine's versatility produces resurgence of Southern species.
Southern Pine Plywood Comes of Age ..... **Mar., p. 35**
Expanding markets produce increased plant construction.
Perpetuating the Species ..... **Mar., p. 38**
Forestry practices boost Southern Pine growth beyond harvest rate.
Kirby Builds a Lumber Empire ..... **Mar., p. 39**
Coordinating supply, planned growth and efficient equipment gets results.
Marketing Means and Architectural Trends ..... **Mar., p. 42**
Enlarged architectural usage is a result of efficient marketing.
No Hand-Outs for War on Poverty ..... **Mar., p. 48**
Incentive, reinvestment keynotes community mill project, not "free" aid.
Will Walnut Have a Future ..... **April, p. 25**
Heavy export of fine hardwoods depletes U. S. supply.
Walnut Controversy or Extinction ..... **April, p. 27**
Industry faces moving with thin veneers or costly importing.
Qualities of Irradiated Wood ..... **April, p. 33**
Scientists research the properties of irradiated wood.
What Shape Are You in for Sanding ..... **April, p. 41**
Equipment developments promise improved product quality.
The Universal Particleboard ..... **May, p. 31**
Characteristics of Aspen permit broad range of engineered board.
Motivating the Architect ..... **May, p. 35**
Service, product knowledge are "musts" for Plywood sales representatives.
Evans New Prefinish Line ..... **May, p. 39**
Ingredients are simplicity, speed, furniture finish and product variety.
Routing Without Costly Patterns or Labor ..... **May, p. 44**
Automated equipment developments speed production, simplify labor.
New Particleboard Standards ..... **May, p. 48**
Comprehensive standards to help users determine product requirements.
How to Pinpoint New Sources for Profit ..... **June, p. 27**
New management tools to find potential product market and costs.
Fastening Research Solves Hickory Problems ..... **June, p. 31**
Improved nail design holding capacity and penetration effects.
Animal Glues vs. Vinyl Copolymers ..... **June, p. 34**
A comparison of operation, application and adhesive capabilities.
A New Market for Wood Waste ..... **June, p. 38**
Machine design, imaginative marketing find uses for plentiful "scrub" timber.
Free Access Floors for Computers ..... **June, p. 40**
Engineering special purpose products with Plywood.
Product Research Increases Millwork Profits ..... **June, p. 43**
A farm building manufacturer tackles new markets before losing old ones.
Select the Right Kiln ..... **July, p. 25**
What to look for to determine your specific drying needs.
Turn Disaster Into Advantage ..... **July, p. 30**
Information to help keep an operation going despite floods or fire.
Why Gamma Rays Are Best, (Part V) ..... **July, p. 35**
Effects of different irradiation on woods and monomers.
Green Men for Operators ..... **July, p. 52**
Where does industry find a labor force and how is it trained.
Spot Profit Potential ..... **Aug., p. 17**
A management accounting tool to keep on top of ingredients of business.
Inside an Irradiator (Part VI) ..... **Aug., p. 21**
A step-by-step picture of a cobalt-60 treating plant.
Tricky Techniques on Your Tenoner ..... **Aug., p. 24**
Knowledge of equipment capacity provides production versatility.
Healthy Symptoms in FPRS ..... **Aug., p. 25**
Communication on practical application level gets more accomplished.
Newcomer's Notebook-Softwood Plywood ..... **Aug., p. 33**
Explanation of requirements and applications by woodworkers.
Make Materials Flow Pay ..... **Sept., p. 17**
Improved plant layout, location, equipment break deadlock on company growth.
Electric Trucks Save $1000 Each ..... **Sept., p. 22**
Plywood mill combines reduced maintenance with unique leasing plan.
Is WPC Production Practical ..... **Sept., p. 24**
Industry, government examine production aspects and plant locations.
Men to Meet Industry's Challenge ..... **Sept., p. 30**
U. of Massachusetts offers unique courses to train students.
NHLA is Trying to Improve Convention Format ..... **Sept., p. 41**
Convention improvements are benefiting this wood-oriented association.
Zero Defects Reduces Rejects ..... **Oct., p. 25**
A management concept that doesn't believe "human error" is necessary.
Put WPC Magic Into Commercial Use ..... **Oct., p. 33**
New York industry and government agencies study state potential for plants.
Expansion Problem: Negative Air Pressure ..... **Oct., p. 36**
New plants and additions require competent air make-up engineering.
First American Caul-less Particleboard ..... **Nov., p. 17**
Engineering advances of continuously graded board provide new concepts.
Good Kiln Loading Practices Yield Profits ..... **Nov., p. 28**
Adherence to certain rules saves degrade losses.
Blue Stain is Not Necessary ..... **Nov., p. 32**
Origin and methods of prevention in materials.
Chicago Civic Center Architectural Woodwork ..... **Dec., p. 17**
Shrewd management, high craft skills, job coordination are ingredients.
Why Pay For Clean Air ..... **Dec., p. 23**
Explanation of compressed air equipment and its specific uses.
Modernization Money Brings 10% ..... **Dec., p. 30**
Materials handling and equipment designs boast output and reduce costs.
